DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-2, 4-5, 7-8, 10-11, and 13 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-20 of copending Application No. 10/793,179. Although the conflicting claims are not identical, they are not patentably distinct from each other because the instant claims fully encompass those of 10/793,179.

Regarding claim 13, it would have been obvious to one having ordinary skill in the art at the time of the invention to have applied the additive in the form of a band circumscribing the cigarette rod since applications of additives to the wrapping of cigarette rods, in this pattern, is known in the tobacco art.

Art Unit: 1731

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

5. Claims 1, 4, and 7 recites the limitation "the additive material". There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 1-2, 4-5, 7-8, 10-11 and 13 are rejected under 35 U.S.C. 102(b) as being anticipated by Luke (US. Pat. No. 4,583,558).

Luke discloses all that is recited in the claims since it teaches a method, and an apparatus for carrying out same, for producing a cigarette having a pattern of additive material. Such includes the step of/means for supplying a formed cigarette rod/two-up filtered cigarette via cork drum 6, means for rotating the cigarette rod about its longitudinal axis in a controlled manner via rolling plate 3, and means for applying a

Art Unit: 1731

predetermined pattern of additive material to at least one predetermined region of the cigarette rod as the cigarette is rotated via printing die 1 (corresponding to the claimed "application means") – which causes a pattern of additive material to be formed (i.e. "applying a ..pattern of additive material") via heating elements, said pattern extending or being repeated over the full circumference of the smoking article (corresponding to the claimed "band circumscribing the cigarette rod"). (See entire document, especially col. 1, lines 4-6, 31-32, 38-40, 55-58; col. 2, lines 14-19, 27-35, 39-54; col. 3, lines 3-7, 44-46; col. 4, lines 51-54).

Allowable Subject Matter

8. Claims 3, 6, 9, 12, and 14-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
